

Vision Statement

- Project name- Smarter foodies.
- For android users of all ages who want to discover a new culinary world, keep track of what they eat and buy, while saving money and resources. The Smarter foodie's app is a social app that allows users to plan their weekly meals, generating a precise ingredients list to buy and sharing recipes. Unlike traditional social networking web sites and apps such as Facebook and Instagram, our product focus will be on the food and not the person.
- project's goals -Creating a new platform of food sharing, smarter resources usage and planning. Our application's main goal is to help users plan their weekly meals, generating a precise ingredients list to buy and sharing recipes.

- Project scope-

Essential:

The application will have two kinds of users, chef and guest. Any user can search for a specific recipe, plan his/her weakly meals, generate the ingredients list and get notifications from the app accordingly.

Only a chef can CRUD recipes from and to the firebase database.

In addition, scraping the initial data from an existing recipes site.

Desirable:

1. Implement a social media app (Instagram like) for food. Any user will have a profile page where he/she could upload a picture, some personal information and his recipes.

The user will have the ability to search for a specific profile. In addition, he will have the ability to follow another user/s.

2. After generating an ingredients list, point the user to the most relevant market site.

3. Listing an existing ingredients and search for matching recipes.

4. Adding a feature to upload recipes more easily.

Not included:

This is not an ordering app.

There will not be a platform to upload videos.
